## Grains/Breads

Grains/Breads Component for the Child Nutrition Programs

All reimbursable meals offered under the food-based menu planning approach in the National School Lunch Program (NSLP), Child and Adult Care Food Program (CACFP), and Summer Food Service Program (SFSP) must include grains/ breads food product(s). A reimbursable school breakfast in the School Breakfast Program (SBP) and a reimbursable supplement in the CACFP or an Afterschool Snack may contain a grains/breads component.

FNS meal pattern regulations establish the minimum serving size(s) of grains/ breads required for breakfasts, lunches, suppers, and supplements (snacks). Meal pattern charts for each of the Child Nutrition Programs are on pages I-7 through I-27.

Bran is the seed husk or outer coating of cereal grains such as wheat, rye, and oats. The bran can be mechanically removed from the flour or meal by sifting or bolting.
Breakfast cereal is any cereal served ready to eat (cold dry) or cooked as a menu item for breakfast and other meals, as appropriate.
Creditable grains represent all of the grains and grain components that count towards a creditable grains/breads component; they are enriched or wholegrain meal and/or flour, bran, and/or germ.
Enriched means that the product conforms to the Food and Drug Administration's standard of identity for levels of iron, thiamin, riboflavin, niacin, and folic acid. The terms "enriched," "fortified," or similar terms indicate the addition of one or more vitamins or minerals or protein to a food, unless an applicable Federal regulation requires the use of specific words or statements.

Flour is the product derived by finely grinding and bolting (sifting) wheat or other grains. Flour may be made from all grains (wheat, rye, corn, etc.).

- Grains/Breads servings designates the contribution a given serving size makes toward the grains/breads component. The term "grains/breads serving" appears in Column 4 of the yield table (except for Group H foods).
- Germ is the vitamin-rich embryo of the grain kernel. The germ can be separated before milling for use as a cereal or food supplement.
$\square$ Primary grain ingredient is the first listed grain ingredient in the ingredient statement.

Examples of Foods That Qualify as Grains/Breads

Whole-grain flour or meal is the product derived by grinding the entire grain. If a flour or meal does not contain the bran and the germ, it is not whole grain.

Foods that qualify as grains/breads in the Child Nutrition Programs are enriched or whole-grain, or are made from enriched or whole-grain meal and/or flour. Bran and germ are credited the same as enriched or whole-grain meal or flour. Such foods include, but are not limited to:

Breads that are enriched or whole-grain or made from enriched or wholegrain meal and/or flour, bran, and/or germ.
Biscuits, bagels, rolls, tortillas, muffins, or crackers made with enriched or whole-grain meal and/or flour, bran, and/or germ.
Cereal grains (cooked) such as rice, bulgur, oatmeal, corn grits, wheat, or couscous that are enriched, whole-grain, or fortified.

Ready-to-eat breakfast cereals that are enriched, whole-grain, or fortified.
Cereals or bread products that are used as an ingredient in another menu item such as crispy rice treats, oatmeal cookies, or breading on fish or poultry when the cereal or bread ingredients are enriched or whole-grain, or when the cereal is fortified.

Macaroni or noodle products (cooked) made with enriched or whole-grain flour. Program regulations for the NSLP and the SFSP allow enriched macaroni products that have been fortified with protein to be counted to meet either a grains/breads or meat/meat alternate requirement, but not as both components in the same meal.
Sweet food products such as toaster pastries, coffee cake, doughnuts, sweet rolls, cookies, cakes, or formulated grain-fruit products (authorized under Appendix A of 7 CFR Part 220) when made with whole grain, enriched or whole-grain meal and/or flour, bran, and/or germ and served, as permitted under Exhibit A. When sweet food products are permitted, no more than one sweet grains/ breads serving per day may be a dessert, and sweet snack food products should not be served as part of a supplement (snack) more than twice a week.
Pie crust when made with enriched or whole-grain meal and/or flour and served, as allowed under Exhibit A.
Non-sweet snack food products such as hard pretzels, hard bread sticks, and tortilla chips made from enriched or whole-grain meal and/or flour.
I. Criteria for

Determining
Acceptable Grains/Breads Under the Food-Based Menu Planning Approaches

## II. Determining Grains/Breads Creditability

Use the following criteria as a basis for crediting items to meet the grains/breads requirement under the food-based menu planning approaches.
A. All grains/breads items must be enriched or whole-grain, made from enriched or whole-grain meal and/or flour. If using a cereal it must be whole-grain, enriched, or fortified. Bran and germ are credited the same as enriched or whole-grain meal or flour.
B. The label must indicate that 1) the food product is enriched or wholegrain, made from enriched or whole-grain meal and/or flour, bran, and/or germ, or 2) the cereal is whole-grain, enriched, or fortified. If the food product is enriched, it must meet the Food and Drug Administration's standards of identity (21 CFR Part 136, Part 137, Part 139) for enriched bread, macaroni and noodle products, rice, or cornmeal.
C. The food product must be provided in quantities specified in the appropriate program regulations. One-quarter (1/4) of a serving is the smallest amount allowable to be credited toward the minimum quantities of grains/ breads specified in program regulations.

To review a grains/breads food product to determine if it is creditable, Child Nutrition Programs need to verify that the food product is enriched or whole-grain, or that it is made from enriched or whole-grain meal and/or flour, bran, and/or germ, or if it is a cereal, that it is whole-grain, enriched, or fortified.

The steps listed here will help determine if a food product is creditable towards the grains/breads component of a reimbursable meal. If at any point during the steps a "yes" answer is obtained, proceed to Section III, Criteria for Determining Serving Sizes. If you answer "no" to all of the steps from A to H 2 , the food product is not creditable towards the grains/ breads component of a reimbursable meal.

The following steps are summarized in the flow chart on page 3-7.
A. Is the food product labeled as "whole-grain"?

If a food product is made from whole grain, the product name on the label will usually include the word "whole" or "entire".

Some examples include: "whole wheat bread," "entire wheat bread," "whole wheat rolls," "entire wheat rolls," "whole wheat buns," "entire wheat buns," and "whole wheat macaroni products".
B. Is the food product labeled as "enriched"?

If a food product is enriched, the product name on the label will include the word "enriched."

Some examples include: "enriched bread," "enriched rolls," "enriched buns," "enriched rice," "enriched macaroni products," "enriched egg noodle products," "enriched grits," and "enriched cereal".

## or

C. Is the food product a fortified cereal? (Fortification only applies to cereals, so if the food product is not a cereal, continue on to step D).

If a cereal is fortified, the word "fortified" will be included on the product label.

## or

D. In the ingredient statement, is the primary grain ingredient labeled "enriched"?

Ingredients with standards of enrichment will include the word "enriched" in the ingredient name. The usual method of declaration for enriched grain ingredients is to list the established or usual name of the ingredient along with the word "enriched" followed by a parenthetical listing of the grain and the enrichment ingredients.

Some examples include: "enriched wheat flour (wheat flour, niacin, iron, thiamine mononitrate, riboflavin, folic acid)"; "enriched cornmeal (...)"; "enriched self-rising flour (...)"; and "enriched farina (...)".

## or

E. In the ingredient statement, is the primary grain ingredient designated as a whole grain?

A whole grain ingredient will usually include the word "whole," "entire," "cracked," "crushed," or "groats."

Some examples include: "whole wheat flour," "entire wheat flour," "cracked wheat," "crushed wheat," "buckrwheat groats," "graham flour" (which is another name for whole wheat flour), "brown rice" (which indicates that the rice retains the bran layer), "old-fashioned oatmeal" (also called "rolled oats"), "quick-cooking oats," "whole corn," and "whole cornmeal".
or
F. In the ingredient statement, does the primary grain ingredient appear to be whole grain but it is not designated as whole grain?
When the ingredient statement does not clearly indicate that the primary grain ingredient is whole grain, the Child Nutrition Program operator must obtain documentation from the manufacturer stating that the grain is whole grain prior to using the food product toward meeting meal pattern requirements.

Some examples include: "amaranth," "corn," "millet," and "quinoa".
or
G. In the ingredient statement, is the primary grain ingredient bran and/or germ?
Bran and germ are two components of grains. While not whole grains, they are nutritious portions of the grain and are, therefore, credited the same as whole-grain or enriched ingredients. Bran or germ will be listed along with the name of the grain.

Some examples include: "oat bran" and "wheat germ".
or
H1. Although the primary grain ingredient is not creditable, does the ingredient statement list other grains that are creditable?
If a food product contains grain(s) that are creditable, but a non-creditable grain ingredient is the primary grain ingredient, then documentation will be needed to determine the grams of creditable grain(s) per serving of that food product in order to be used towards meeting meal requirements.

H2. If the primary grain ingredient is not creditable, but the ingredient statement does include creditable grain(s), the Child Nutrition program operator must obtain documentation from the manufacturer. The documentation must state 1) the gram weight or percentage of all creditable grains in one defined portion, and 2) that the grain(s) counted towards the percentage given are either enriched and/or whole-grain and/or bran, and/or germ. If a grain is not creditable, it should not be included in the weight or percent given in the documentation.

> Some examples of non-creditable grain ingredients include: "bromated flour," "corn grits," "degerminated cornmeal," "degerminated (grain)," "durum flour," "farina," "flour," "plain flour," "self-rising flour," "semolina flour," "white flour," and "wheat flour".

## Instructions for Using the Grains/Breads Flow Chart

If you have answered "no" to all the above steps, the food product is not creditable towards the grains/breads component of a reimbursable meal. These items may be served as an "other foods" item and used to help round out the meal as well as contribute calories and nutrients.

Child Nutrition Programs need to verify that the food product is enriched or whole-grain, or that it is made from enriched or whole-grain meal and/or flour, bran, and/or germ, or if it is a cereal, that it is whole-grain, enriched, or fortified. By using the following flow chart along with steps A-H2 above, you can evaluate a grains/breads food product to determine if it is creditable towards the grains/ breads component of a reimbursable meal.

Once you have determined if a food product is creditable, it is important to read through Section III, Criteria for Determining Serving Sizes. This section will explain when to use Exhibit A of FCS Instruction 783.1, Rev $2^{1}$ (see pages 3-15 \& 3-16), or calculate grams of creditable grains (see pages 3-9 through $3-13$ ) to determine the portion size required to provide one grains/breads serving.

[^0]
## Flow Chart for Determining Grains/Breads Creditability

## III. Criteria for <br> Determining Serving Sizes

There are two different ways to determine the portion size required to provide one grains/breads serving: by using Exhibit A of FCS Instruction 783.1, Rev 2, or by calculating the grams of creditable grains.

## A. Determining Serving Sizes Based on Exhibit A:

One grains/breads serving for commonly available food products can be determined using Exhibit A (see pages 3-15 \& 3-16) of the FCS Grains/Breads Instruction 783.1, Rev. 2. The wide variety of prepared grains/ breads food products listed in Exhibit A are grouped based on their average grain content.
 Food types having similar concentrations of creditable grains are grouped together. Each group in Exhibit A provides the minimum serving size needed to supply one full grains/ breads serving. Use Exhibit A for products that are whole-grain, enriched, or fortified (if a cereal), or for products that have a creditable grain as the primary grain ingredient.

- The weight needed for the different groups of grains/breads food products to provide one grains/breads serving is different since different types of grains/breads food products have different concentrations of enriched or whole-grain meal and/or flour, bran, and/or germ.

## 1. Exhibit A, Groups A-G:

For the types of food products listed in Groups A-G, one grains/breads serving provides not less than 14.75 grams of enriched or whole-grain meal and/or flour, bran, and/or germ. The serving sizes (weights) given in Exhibit A, Groups A-G, may be used for grains/breads food products that are either commercially purchased or prepared on-site.
Food products that are labeled whole-grain or enriched, and food products that have a creditable grain as the primary grain ingredient should provide the minimum of 14.75 grams of creditable grains per serving (without obtaining manufacturers documentation) as long as the minimum serving sizes (weights) given in Exhibit A are met. If the product is not whole-grain or enriched, or does not have a creditable grain for the primary grain ingredient, you must obtain manufacturer's documentation showing the amount of creditable grain(s) in one portion of the product. Once documentation is obtained, calculate the serving size based on the grams of creditable grains as shown in step B.

Exhibit A, Groups A-G provides the weight needed for $1 / 4$, $1 / 2$, and $3 / 4$ of a grains/breads serving in addition to the weight needed for one grains/breads serving.

## 2. Exhibit A, Groups H \& I:

For the types of food products listed in Groups H and I of Exhibit A to count as one grains/breads serving, the weights and volumes listed therein must be met.

When items in Groups H and I are served as cooked or cold breakfast cereals (such as cooked oatmeal, cooked millet, cooked rice served with milk and sugar, or cold cereal) or cooked pasta, the weights and volumes listed in Exhibit A, groups H or I must be used as noted. For example, the serving size required for one grains/breads serving of cooked oatmeal made from dry oats is $1 / 2$ cup cooked or 25 grams dry oats.
There is an exception to the equivalency of one grains/breads serving for Group H as stated in Exhibit A. For the School Breakfast Program only, the traditional or enhanced meal patterns, grades $K-12$, and the enhanced meal pattern option for grades 7-12, by regulation, one grains/breads serving of cooked and ready-to-eat (cold dry) breakfast cereal is $3 / 4$ cup or 1 ounce. This means $3 / 4$ cup or 1 ounce (whichever is less) for cold dry cereal, or $3 / 4$ cup cooked cereal, count as one grains/breads serving. This serving size is different from the equivalency of one grains/breads serving of $1 / 2$ cup cooked given in Exhibit A, Group H.
Some of the food products in Group H, such as dry oatmeal or cornmeal, may be used as a grain ingredient in a recipe as well as a cooked cereal. When the cereal grain items listed in Group H are used as an ingredient in a recipe such as oatmeal bread or cornmeal muffins (in contrast to being used as a cooked breakfast cereal) do not use the amounts listed in Group H. In this case, one grains/breads serving should be determined using the weights given in Groups A-G of Exhibit A corresponding to the appropriate food group, or calculated using 14.75 grams of the creditable grains in one portion of the recipe.

For example, the credit for oatmeal bread made using dry oats may be determined by two ways: 1) using the serving weight in Group B of Exhibit A which contains "bread" since the food type is now "bread," or 2) using the information in " B " below to determine the serving size needed to provide 14.75 grams of creditable grains.

## B. Determining Serving Sizes Based on Creditable Grains Content:

There are several situations where the creditable grains content would be used to calculate the serving size instead of using the serving weights given in Exhibit A. Some of these situations are: 1) a product is not whole-grain, enriched, or fortified (if a cereal) and the primary grain ingredient is not a creditable grain but there are creditable grains in the product; 2) a manufacturer claims that a product can provide the minimum of 14.75 grams of creditable grains per portion using a serving size less than the weights given in Exhibit A; 3) a product is made on site and you choose to calculate the serving size based on grams of creditable grains instead of using Exhibit A; or 4) a food product does not fit into one of the groups of Exhibit A.
In the above cases, the menu planner will need to document or obtain documentation showing the weight of creditable grain(s) content of the grains/breads item. This will be easy for grains/breads items prepared on site, since the exact weight of the creditable grain(s) ingredient can be documented based on the recipe. For purchased products, the manufacturer will need to be contacted to obtain the required documentation showing the weight of creditable grain(s) per portion contained in a specific food product. Be aware that some manufacturers will not provide this information if they consider it proprietary information. If you have a situation where documentation is required, but the manufacturer cannot supply the documentation, you cannot use that product as a credited grains/breads component of a reimbursable meal.

When the exact or minimum amount of creditable grains can be documented, the grains/breads serving for any grains/breads product found in Groups A through G may be calculated using 14.75 grams of creditable grains as one grains/breads serving. For manufacturer's documentation which provides the gram weight of creditable grain(s) per portion, you will want to start your calculation at step 2 below or at step 6 of the worksheet (see page 3-13).

[^1]Steps to determine how many creditable grains/breads servings a recipe yields:

1) Divide the total grams of "creditable grains" in the recipe by the number of portions the recipe yields: (Note: $1 \mathrm{lb}=453.6$ grams). One "portion" is the amount of the food product you plan to serve; it is not necessarily equivalent to one grains/breads serving.
total grams of enriched or whole-grain meal and/or flour, bran, and/or germ in the recipe
number of portions the recipe yields
This calculation gives you the total grams of creditable grains contained in one portion of your recipe.
2) Divide the total grams of "creditable grains" in one portion by 14.75 grams: (note: 14.75 grams of creditable grains $=$ one full grains/breads serving)

Total grams of "creditable grains" in ONE portion
14.75 grams
= the number of grains/breads servings per portion
This calculation gives you the number of creditable grains/breads servings per portion of the recipe. The smallest creditable serving of the grains/breads component is $1 / 4$ serving.
3) Round down to the nearest $1 / 4$ grains $/$ breads serving. To count as one full grains/breads serving, a food product must contain no less than 14.75 grams ( 0.52 ounces) of enriched or whole-grain meal and/or flour, bran, and/or germ.

Worksheet for Calculating Grains/Breads Contribution from a Recipe for the Types of Food Products in Groups A-G, Using Grams of Creditable Grains

## Instructions:

1. On the worksheet, list each enriched or whole-grain meal and/or flour, bran, and/or germ ingredient in the recipe.
2. Fill in the quantity (cups, pounds, kilograms, ounces, grams, etc.) of each enriched or whole-grain meal and/or flour, bran, and/or germ ingredient in the recipe.
3. Convert the amount of each enriched or whole-grain meal and/or flour, bran, and/or germ ingredient in the recipe to grams. If you do not know the weight per cup of the grain you are using, here are some commonly used conversions:
Number of pounds of ingredient X 453.6 grams
Number of ounces of ingredient X 28.35 grams
Number of cups of enriched white flour X 125 grams
Number of cups of regular rolled oats X 81 grams
Number of cups of quick-cooking oats X 81 grams
Number of cups of regular cornmeal X 122 grams
Number of cups of degermed, enriched cornmeal X 138 grams
Number of cups of stone ground cornmeal X 132 grams
Number of cups of wheat bran X 58 grams
Number of cups of wheat germ X 115 grams
Number of cups of whole wheat flour X 120 grams
4. Add the grams for each grain ingredient to determine the total grams of enriched or whole-grain meal and/or flour, bran, and/or germ in the recipe.
5. Divide the total grams of creditable grains in the recipe by the number of portions in the recipe to determine the number of grams of creditable grains per portion of food product.
6. Divide the number of grams of creditable grains per portion by 14.75 grams (reference amount of enriched or whole-grain meal and/or flour, bran, and/or germ in one
 grains/breads serving).
7. Round down to the nearest $1 / 4$ grains/breads serving.

## Worksheet:

| 1. Creditable Grain <br> Ingredient | 2. Quantity | 3. Convert to <br> Grams | Grams |

$\qquad$ $=$ $\qquad$ grains/breads serving(s)

### 14.75

7. Round down to the nearest $1 / 4$ grains/breads serving.
$\qquad$ creditable grains/breads servings

## Grains/ <br> Breads Chart Introduction

The following Chart titled "Exhibit A - Grains/Breads for the Food-Based Menu Planning Alternatives in the Child Nutrition Programs" provides a general guideline for crediting prepared grains/breads items. The chart is taken from the FCS Grains/Breads Instruction 783-1, Revision 2.

Once you have determined that a food product qualifies as a grains/breads component (see pages 3-3 through 3-7), find the Group on the chart containing the name of the food product. Read the minimum serving size for that group on the right-hand side of the chart.

## FCS Instruction 783.1 Rev 2: Exhibit A GRAINS/BREADS FOR THE FOOD-BASED MENU PLANNING ALTERNATIVES IN THE CHILD NUTRITION PROGRAMS¹,2

| Group A | Minimum Serving Size for Group A |
| :---: | :---: |
| - Bread type coating <br> - Bread sticks (hard) <br> - Chow mein noodles <br> - Crackers (saltines and snack crackers) <br> - Croutons <br> - Pretzels (hard) <br> - Stuffing (dry) Note: weights apply to bread in stuffing. | 1 serving $=20 \mathrm{gm}$ or 0.7 oz <br> $3 / 4$ serving $=15 \mathrm{gm}$ or 0.5 oz <br> $1 / 2$ serving $=10 \mathrm{gm}$ or 0.4 oz <br> $1 / 4$ serving $=5 \mathrm{gm}$ or 0.2 oz |

| Group I | Minimum Serving Size for Group I |
| 1 serving $=3 / 4$ cup or $10 z$, whichever is less | - Ready to eat breakfast cereal (cold dry) ${ }^{\text {5,6 }}$ |

${ }^{3}$ Allowed only for desserts under the enhanced food-based menu planning alternative specified in 7CFR Part 210.10 and supplements (snacks) served under the NSLP, SFSP, and CACFP.
${ }^{4}$ Allowed for desserts under the enhanced food-based menu planning alternative specified in 7CFR Part 210.10 and supplements (snacks) served under the NSLP, SFSP, and CACFP, and for breakfasts served under the SBP, SFSP, and CACFP.
${ }^{5}$ Refer to program regulations for the appropriate serving size for supplements served to children aged 1 through 5 in the NSLP; breakfasts served under the SBP; and meals served to children ages 1 through 5 and adult participants in the CACFP. Breakfast cereals are traditionally served as a breakfast menu item but may be served in meals other than breakfast.
${ }^{6}$ Cereals may be whole-grain, enriched, or fortified.

## Factors Affecting Yield

## Explanation <br> of the Columns

The data for grains/breads in the following table include yield information on common types and customary portion sizes of products that you can buy on the market. All grains/breads items - commercially baked or school baked - must meet the criteria noted on page 3-3.

The approximate weight of a serving of grains/breads is given in the table. If the weight of a serving differs from the approximate weight given, you may need to make adjustments in the amount you buy (see pages I-3 \& I-4 for information on determining in-house yield data).

Column 1 Food As Purchased, AP: In general, foods are arranged in alphabetical order. The Group letter is listed for each product. For additional information on these groups, see Exhibit A (pages 3-15 \& 3-16).

Column 2 Purchase Unit: The purchase unit for grains/breads is generally by the pound or, for cold dry cereals, a package. You can use data for one purchase unit to determine how much of the item you need for the number of people you serve.

Column 3 Servings per Purchase Unit, EP: This column shows the number of servings of a given size obtained from each purchase unit. Numbers in this column are often rounded down in order to help ensure enough food for the number of servings.

Column 4 Serving Size per Meal Contribution: The size of a serving is expressed in volume and/or weight. The number of grains/breads servings is given in parentheses for sliced bread and crackers.

Note that the minimum requirements for cereals and cereal grains are different for each program.

## School Breakfast Program (Traditional and Enhanced)

Ages 1-2: $\quad 1 / 4$ cup or $1 / 3$ oz (whichever is less) cold dry cereal or $1 / 4$ cup cooked cereal grain,

Preschool: $\quad 1 / 3$ cup or $1 / 2$ oz (whichever is less) cold dry cereal or $1 / 3$ cup cooked cereal grain,

Grades K-12: 3/4 cup or 1 ounce (whichever is less) cold dry cereal or $3 / 4$ cup cooked cereal grain,

National School Lunch Program (Traditional and Enhanced)
All levels: $\quad 1 / 2$ cup cooked cereal grain

## Afterschool Snacks

Ages 1-2: $\quad 1 / 4$ cup or $1 / 3 \mathrm{oz}$ (whichever is less) cold dry cereal or $1 / 4$ cup cooked cereal grain,

Ages 3-5: $\quad 1 / 3$ cup or $1 / 2$ oz (whichever is less) cold dry cereal or $1 / 4$ cup cooked cereal grain,

Ages 6-12: $\quad 3 / 4$ cup or 1 oz (whichever is less) cold dry cereal or $1 / 2$ cup cooked cereal grain,

Child and Adult Care Food Program

## Breakfast

Ages 1-2: $\quad 1 / 4$ cup or $1 / 3$ oz (whichever is less) cold dry cereal or $1 / 4$ cup cooked cereal grain,

Ages 3-5: $\quad 1 / 3$ cup or $1 / 2$ oz (whichever is less) cold dry cereal or $1 / 4$ cup cooked cereal grain,

Ages 6-12: $\quad 3 / 4$ cup or 1 oz (whichever is less) cold dry cereal or $1 / 2$ cup cooked cereal grain,

Adults: $\quad 1-1 / 2$ cup or 2 oz (whichever is less) cold dry cereal or 1 cup cooked cereal grain,

## Lunch and Supper

Ages 1-2 and 3-5: 1/4 cup cooked cereal grain,
Ages 6-12: $\quad 1 / 2$ cup cooked cereal grain,
Adult: $\quad 1$ cup cooked cereal grain,

## Snacks

Ages 1-2: $\quad 1 / 4$ cup or $1 / 3 \mathrm{oz}$ (whichever is less) cold dry cereal or $1 / 4$ cup cooked cereal grain,

Ages 3-5: $\quad 1 / 3$ cup or $1 / 2$ oz (whichever is less) cold dry cereal or $1 / 4$ cup cooked cereal grain,

Ages 6-12 and Adults: $\quad 3 / 4$ cup or 1 oz (whichever is less) cold dry cereal or $1 / 2$ cup cooked cereal grain,

## Summer Food Service Program

| Breakfast and Snacks | $3 / 4$ cup or 1 oz (whichever is less) <br> cold dry cereal, or $1 / 2$ cup cooked cereal <br> grain |
| :--- | :--- |
| Lunch or Supper | $1 / 2$ cup cooked cereal grain. |

Note: Dry cereals vary greatly in number of servings per pound or package. Check the cereal box for the number and/or size of servings.

Column 5 Purchase Units for 100 Servings: This column shows the number of purchase units needed for 100 servings. Numbers in this column are generally rounded up in order to help ensure enough food for the number of servings.

Column 6 Additional Yield Information: This column gives other information to help you calculate the amount of food you need to prepare meals. For example, the number of cups you will get from one pound of food as purchased is shown for many grains/breads items.

[^0]:    ${ }^{1}$ At the time this instruction was written, the Agency name was Food and Consumer Service (FCS).

[^1]:    ${ }^{2}$ Creditable grains are enriched or whole-grain meal and/or flour, bran and/or germ.

[^2]:    ${ }^{3}$ The number of slices per purchase unit does not include the end slices

[^3]:    ${ }^{4}$ The yield for rice differs depending on how it is cooked. The yields provided in this guide represent the lower range of the average yield for each type of rice. If you consistently get a different yield for your cooking method, you may want to see pages I-3 \& I-4 of the introduction on how to establish in-house yield data in cooperation with your State agency.

[^4]:    ${ }^{4}$ The yield for rice differs depending on how it is cooked. The yields provided in this guide represent the lower range of the average yield for each type of rice. If you consistently get a different yield for your cooking method, you may want to see pages I-3 \& I-4 of the introduction on how to establish in-house yield data in cooperation with your State agency. ${ }^{5}$ Does not include popcorn cakes or popcorn in combination with other grains since popcorn is not creditable towards meal pattern requirements.
